K_L^0 – THIS IS PART 2 OF 4

To reduce the size of this section's PostScript file, we have divided it into four PostScript files. We present the following index:

Page $\#$	Section name
1	Mass
1	Mean life
2	Decay modes
4	Decay rates
6	Branching ratios
11	Rare or forbidden modes

$\mathrm{PART}\ 2$

Page $\#$	Section name
$\begin{array}{c} 18\\ 20 \end{array}$	Energy dependence of K_L^0 Dalitz plot K_L^0 form factors

$\operatorname{PART} 3$

Page $\#$	Section name
26	Fits for <i>CP</i> -violation parameters

$\operatorname{PART} 4$

Page $\#$	Section name
$35 \\ 41$	$CP-Violation \text{ parameters in } K_L^0 \text{ Decays}$ $\Delta S = \Delta Q \text{ in } K^0 \text{ decays}$
$\begin{array}{c} 41\\ 43\\ 44 \end{array}$	$x = A(\overline{K}^{0} \to \pi^{-}\ell^{+}\nu) / A(K^{0} \to \pi^{-}\ell^{+}\nu)$ CPT-violation parameters in K^{0} decays References

ENERGY DEPENDENCE OF K⁰_L DALITZ PLOT

For discussion, see note on Dalitz plot parameters in the K^{\pm} section of the Particle Listings above. For definitions of a_v , a_t , a_u , and a_y , see the earlier version of the same note in the 1982 edition of this *Review* published in Physics Letters **111B** 70 (1982).

$$|\text{matrix element}|^2 = 1 + gu + hu^2 + jv + kv^2$$
 where $u = (s_3 - s_0) \ / \ m_\pi^2$ and $v = (s_1 - s_2) \ / \ m_\pi^2$

K⁰_L FORM FACTORS

For discussion, see note on form factors in the K^{\pm} section of the Particle Listings above.

In the form factor comments, the following symbols are used.

 f_+ and f_- are form factors for the vector matrix element. f_S and f_T refer to the scalar and tensor term. $f_0 = f_+ + f_- t/(m_K^2 - m_\pi^2)$. λ_+ , λ_- , and λ_0 are the linear expansion coefficients of f_+ , f_- , and f_0 . λ_+ refers to the $\mathcal{K}^0_{\mu3}$ value except in the \mathcal{K}^0_{e3} sections. $d\xi(0)/d\lambda_+$ is the correlation between $\xi(0)$ and λ_+ in $\mathcal{K}^0_{\mu3}$. $d\lambda_0/d\lambda_+$ is the correlation between λ_0 and λ_+ in $\mathcal{K}^0_{\mu3}$. t = momentum transfer to the π in units of m_π^2 . DP = Dalitz plot analysis. PI = π spectrum analysis. POL= μ polarization analysis. BR = $\mathcal{K}^0_{\mu3}/\mathcal{K}^0_{e3}$ branching ratio analysis. E = positron or electron spectrum analysis.

 $\mathsf{RC} = \mathsf{radiative corrections.}$

λ_+ (LINEAR ENERGY DEPENDENCE OF f_+ IN κ_{e3}^0 DECAY) For radiative correction of κ_{e3}^0 DP, see GINSBERG 67 and BECHERRAWY 70.

 \bullet \bullet \bullet We do not use the following data for averages, fits, limits, etc. \bullet \bullet

$^{+0.50\pm0.61}_{-3.9\ \pm0.4}$	unknown	16k 3140	⁷⁷ DALLY ⁷⁸ BASILE	72 70	ASPK OSPK	DP DP, indep of λ_+
$-0.68\substack{+0.12\\-0.20}$	-26	16k	77 CHIEN	70	ASPK	DP

⁷⁰ BIRULEV 81 error, $d\xi(0)/d\lambda_+$ calculated by us from λ_0 , λ_+ . $d\lambda_0/d\lambda_+ = 0$ used.

 71 HILL 79 and CHO 80 calculated by us from $\lambda_0,\,\lambda_+,$ and $d\lambda_0/d\lambda_+.$

⁷² BUCHANAN 75 is calculated by us from λ_0 , λ_+ and $d\lambda_0/d\lambda_+$ because their appendix A value -0.20 ± 22 assumes $\xi(t)$ constant, i.e. $\lambda_- = \lambda_+$.

⁷³ DONALDSON 74B gives $\xi = -0.11 \pm 0.02$ not including systematics. Above error and $d\xi(0)/d\lambda_+$ were calculated by us from λ_0 and λ_+ errors (which include systematics) and $d\lambda_0/d\lambda_+$.

⁷⁴ PEACH 73 gives $\xi(0) = -0.95 \pm 0.45$ for $\lambda_+ = \lambda_- = 0.025$. The above value is for $\lambda_- = 0$. K.Peach, private communication (1974).

⁷⁵ ALBROW 72 fit has λ_{-} free, gets $\lambda_{-} = -0.030 \pm 0.060$ or $\Lambda = +0.15 \substack{+0.17 \\ -0.11}$.

⁷⁶CARPENTER 66 $\xi(0)$ is for $\lambda_+ = 0$. $d\xi(0)/d\lambda_+$ is from figure 9.

⁷⁷ CHIEN 70 errors are statistical only. $d\xi(0)/d\lambda_+$ from figure 4. DALLY 72 is a reanalysis of CHIEN 70. The DALLY 72 result is not compatible with assumption $\lambda_- = 0$ so not included in our fit. The nonzero λ_- value and the relatively large λ_+ value found by DALLY 72 come mainly from a single low t bin (figures 1,2). The (f_+,ξ) correlation was ignored. We estimate from figure 2 that fixing $\lambda_- = 0$ would give $\xi(0) = -1.4 \pm 0.3$ and would add 10 to χ^2 . $d\xi(0)/d\lambda_+$ is not given.

⁷⁸ BASILE 70 is incompatible with all other results. Authors suggest that efficiency estimates might be responsible.

$\xi_{b}=f_{-}/f_{+}$ (determined from $K^{0}_{\mu3}/K^{0}_{e3}$)

The $\mathcal{K}^{0}_{\mu3}/\mathcal{K}^{0}_{e3}$ branching ratio fixes a relationship between $\xi(0)$ and λ_{+} . We quote the author's $\xi(0)$ and associated λ_{+} but do not average because the λ_{+} values differ. The fit result and scale factor given below are not obtained from these ξ_{b} values. Instead they are obtained directly from the authors $\mathcal{K}^{0}_{\mu3}/\mathcal{K}^{0}_{e3}$ branching ratio via the fitted $\mathcal{K}^{0}_{\mu3}/\mathcal{K}^{0}_{e3}$ ratio $(\Gamma(\pi^{\pm}\mu^{\mp}\nu)/\Gamma(\pi^{\pm}e^{\mp}\nu_{e}))$. The parameter ξ is redundant with λ_{0} below and is not put into the Meson Summary Table.

⁷⁹ EVANS 73 replaces EVANS 69.

 $\xi_c = f_{-}/f_{+}$ (determined from μ polarization in $\mathcal{K}^{0}_{\mu3}$)

The μ polarization is a measure of $\xi(t)$. No assumptions on λ_{+-} necessary, t (weighted by sensitivity to $\xi(t)$) should be specified. In λ_+ , $\xi(0)$ parametrization this is $\xi(0)$ for $\lambda_{+} = 0$. $d\xi/d\lambda = \xi t$. For radiative correction to μ polarization in $K_{\mu3}^{0}$, see GINSBERG 73. The parameter ξ is redundant with λ_0 below and is not put into the Meson Summary Table.

⁸⁶ BIRULEV 81 gives $d\lambda_0/d\lambda_+ = -1.5$, giving an unreasonably narrow error ellipse which dominates all other results. We use $d\lambda_0/d\lambda_+ = 0$.

 $^{87}\lambda_0$ value is for $\lambda_+ = 0.03$ calculated by us from $\xi(0)$ and $d\xi(0)/d\lambda_+$.

 88 BUCHANAN 75 value is from their appendix A and uses only $K_{\mu3}$ data. $d\lambda_0/d\lambda_+$ was obtained by private communication, C.Buchanan, 1976.

⁸⁹ DONALDSON 74B $d\lambda_0/d\lambda_+$ obtained from figure 18.

 90 PEACH 73 assumes λ_+ = 0.025. Calculated by us from $\xi(0)$ and $d\xi(0)/d\lambda_+.$

⁹¹ ALBROW 72 λ_0 is calculated by us from ξ_A , λ_+ and $d\xi(0)/d\lambda_+$. They give $\lambda_0 = -0.043 \pm 0.039$ for $\lambda_- = 0$. We use our larger calculated error.

 92 CHO 80 BR result not independent of their Dalitz plot result.

 93 Fit for λ_0 does not include this value but instead includes the ${\it K}_{\mu3}/{\it K}_{e3}$ result from this experiment.

HTTP://PDG.LBL.GOV

- ⁹⁴ DALLY 72 gives $f_0 = 1.20 \pm 0.35$, $\lambda_0 = -0.080 \pm 0.272$, $\lambda_0' = -0.006 \pm 0.045$, but with a different definition of λ_0 . Our quoted λ_0 is his λ_0/f_0 . We cannot calculate true λ_0 error without his (λ_0, f_0) correlations. See also note on DALLY 72 in section ξ_A .
- ⁹⁵ BASILE 70 λ_0 is for $\lambda_+ = 0$. Calculated by us from ξ_A with $d\xi(0)/d\lambda_+ = 0$. BASILE 70 is incompatible with all other results. Authors suggest that efficiency estimates might be responsible.
