## OMITTED FROM SUMMARY TABLE

There is some evidence for two resonances in this wave between 1800 and 2200 MeV (see CUTKOSKY 80). However, the solution of HOEHLER 79 is quite different.

Most of the results published before 1975 are now obsolete and have been omitted. They may be found in our 1982 edition, Physics Letters **111B** (1982).

## N(2080) FOOTNOTES

<sup>1</sup>CUTKOSKY 80 finds a lower mass  $D_{13}$  resonance, as well as one in this region. Both are listed here.

<sup>2</sup>The range given for DEANS 75 is from the four best solutions. Disagrees with  $\pi^+ p \rightarrow \Sigma^+ K^+$  data of WINNIK 77 around 1920 MeV.
