t' (4th Generation) Quark, Searches for

MASS LIMITS for t' (4th Generation) Quark or Hadron in $p\overline{p}$ Collisions

VALUE (GeV)	CL%	DOCUMENT ID	TECN	COMMENT
>256	95	1,2 AALTONEN	08н CDF	$p\overline{p}$ at 1.96 GeV

¹ Searches for pair production of a new heavy top-like quark t' decaying to a W boson and another quark by fitting the observed spectrum of total transverse energy and reconstructed t' mass in the lepton + jets events.

Fig. 1 gives that lower bound on $m_{t'}$ in the plane of $\sin^2(\theta_{h\,t'})$ and $m_{h'}$.

² HUANG 08 reexamined the t' mass lower bound of 256 GeV obtained in AALTONEN 08H that assumes B($b' \to qZ$) = 1 for q=u, c which does not hold when $m_{b'} < m_{t'} - m_W$ or the mixing $\sin^2(\theta_{b\,t'})$ is so tiny that the decay occurs outside of the vertex detector.
