## B-particle organization

Many measurements of B decays involve admixtures of B hadrons. Previously we arbitrarily included such admixtures in the  $B^\pm$  section, but because of their importance we have created two new sections: " $B^\pm/B^0$  Admixture" for  $\Upsilon(4S)$  results and " $B^\pm/B^0/B_S^0/b$ -baryon Admixture" for results at higher energies. Most inclusive decay branching fractions and  $\chi_b$  at high energy are found in the Admixture sections.  $B^0-\overline{B}^0$  mixing data are found in the  $B^0$  section, while  $B_S^0-\overline{B}_S^0$  mixing data and  $B-\overline{B}$  mixing data for a  $B^0/B_S^0$  admixture are found in the  $B_S^0$  section. CP-violation data are found in the  $B^\pm$ ,  $B^0$ , and  $B^\pm$   $B^0$  Admixture sections. b-baryons are found near the end of the Baryon section. Recently, we also created a new section: " $V_{C\,D}$  and  $V_{U\,D}$  CKM Matrix Elements."

The organization of the B sections is now as follows, where bullets indicate particle sections and brackets indicate reviews.
