

N(1685) ??

$$I(J^P) = \frac{1}{2}(??) \quad \text{Status: } *$$

OMITTED FROM SUMMARY TABLE

There is a small literature (which we do not try to cover) on this possible narrow state. See KUZNETSOV 11A, MART 11, and the other papers for further references. This state does not gain status by being a sought-after member of a baryon anti-decuplet.
