

$\Sigma(1915)$ 5/2 $^{+}$ $I(J^P) = 1(\frac{5}{2}^{+})$ Status: ***

Discovered by COOL 66. For results published before 1974 (they are now obsolete), see our 1982 edition Physics Letters **111B** 1 (1982).

This entry only includes results from partial-wave analyses. Parameters of peaks seen in cross sections and invariant-mass distributions in this region used to be listed in a separate entry immediately following. They may be found in our 1986 edition Physics Letters **170B** 1 (1986).

$\Sigma(1915)$ FOOTNOTES

- ¹ The two entries for CORDEN 77C are from two different acceptable solutions.
 - ² Preferred solution 3; see CORDEN 76 for other possibilities.
 - ³ The two MARTIN 77 values are from a T-matrix pole and from a Breit-Wigner fit.
 - ⁴ The mass and width are fixed to the GOPAL 77 values due to the low elasticity.
 - ⁵ The published sign has been changed to be in accord with the baryon-first convention.
