

$\Sigma_c(2455)$ $I(J^P) = 1(\frac{1}{2}^+)$ Status: ****

The angular distribution of $B^- \rightarrow \Sigma_c(2455)^0 \bar{p}$ favors $J = 1/2$ (as the quark model predicts). $J = 3/2$ is excluded by more than four σ see AUBERT 08BN.

 $\Sigma_c(2455)$ MASSES

The masses are obtained from the mass-difference measurements that follow.

−10.8 ±2.9	³ DIESBURG	87	SPEC $nA \sim 600$ GeV

³ DIESBURG 87 is completely incompatible with the other experiments, which is surprising since it agrees with them about $m_{\Sigma_c(2455)^{++}} - m_{\Lambda_c^+}$. We go with the majority here.
