

$\Lambda(2100) 7/2^-$ $I(J^P) = 0(\frac{7}{2}^-)$ Status: ****

Most of the results published before 1973 are now obsolete and have been omitted. They may be found in our 1982 edition *Physics Letters* **111B** 1 (1982).

This entry only includes results from partial-wave analyses. Parameters of peaks seen in cross sections and in invariant-mass distributions around 2100 MeV used to be listed in a separate entry immediately following. It may be found in our 1986 edition *Physics Letters* **170B** 1 (1986).

$\Lambda(2100)$ FOOTNOTES

¹ The NAKKASYAN 75 values are from the two best solutions found. Each has the $\Lambda(2100)$ and one additional resonance (P_3 or F_5).

² Note that the three for BACCARI 77 entries are for three different waves.

³ The published sign has been changed to be in accord with the baryon-first convention. The upper limit on the G_3 wave is 0.03.
