

**$\Sigma(2250)$**  $I(J^P) = 1(?^?)$  Status: \*\*\*

Results from partial-wave analyses are too weak to warrant separating them from the production and cross-section experiments. LASINSKI 71 in  $\bar{K}N$  using a Pomeron + resonances model, and DEBELLEFON 76, DEBELLEFON 77, and DEBELLEFON 78 in energy-dependent partial-wave analyses of  $\bar{K}N \rightarrow \Lambda\pi$ ,  $\Sigma\pi$ , and  $N\bar{K}$ , respectively, suggest two resonances around this mass.

## $\Sigma(2250)$ DECAY MODES

Mode	Fraction ( $\Gamma_i/\Gamma$ )
$\Gamma_1 N\bar{K}$	<10 %
$\Gamma_2 \Lambda\pi$	seen
$\Gamma_3 \Sigma\pi$	seen
$\Gamma_4 N\bar{K}\pi$	
$\Gamma_5 \Xi(1530)K$	

The above branching fractions are our estimates, not fits or averages.

## $\Sigma(2250)$ BRANCHING RATIOS

See "Sign conventions for resonance couplings" in the Note on  $\Lambda$  and  $\Sigma$  Resonances.
