

$\Lambda(2350) \ 9/2^+$  $I(J^P) = 0(\frac{9}{2}^+) \text{ Status: } ***$ 

DAUM 68 favors  $J^P = 7/2^-$  or  $9/2^+$ . BRICMAN 70 favors  $9/2^+$ . LASINSKI 71 suggests three states in this region using a Pomeron + resonances model. There are now also three formation experiments from the College de France-Saclay group, DEBELLEFON 77, BACCARI 77, and DEBELLEFON 78, which find  $9/2^+$  in energy-dependent partial-wave analyses of  $\bar{K}N \rightarrow \Sigma\pi, \Lambda\omega$ , and  $N\bar{K}$ .
