0.6±0.2±0.1      16      BECKER      87      MRK3  $J/\psi \rightarrow \phi K \bar{K} \pi$

<sup>1</sup> ABLIKIM 15H reports  $[\Gamma(J/\psi(1S) \rightarrow \phi f_1(1285))/\Gamma_{\text{total}}] \times [B(f_1(1285) \rightarrow \eta \pi^+ \pi^-)] = (1.20 \pm 0.6 \pm 0.14) \times 10^{-4}$  which we divide by our best value  $B(f_1(1285) \rightarrow \eta \pi^+ \pi^-) = (35 \pm 15) \times 10^{-2}$ . Our first error is their experiment's error and our second error is the systematic error from using our best value.

<sup>2</sup> We attribute to the  $f_1(1285)$  the signal observed in the  $\pi^+ \pi^- \eta$  invariant mass distribution at 1297 MeV.

15 $\pm$ 2	168	FRANKLIN	83	MRK2	$e^+e^-$

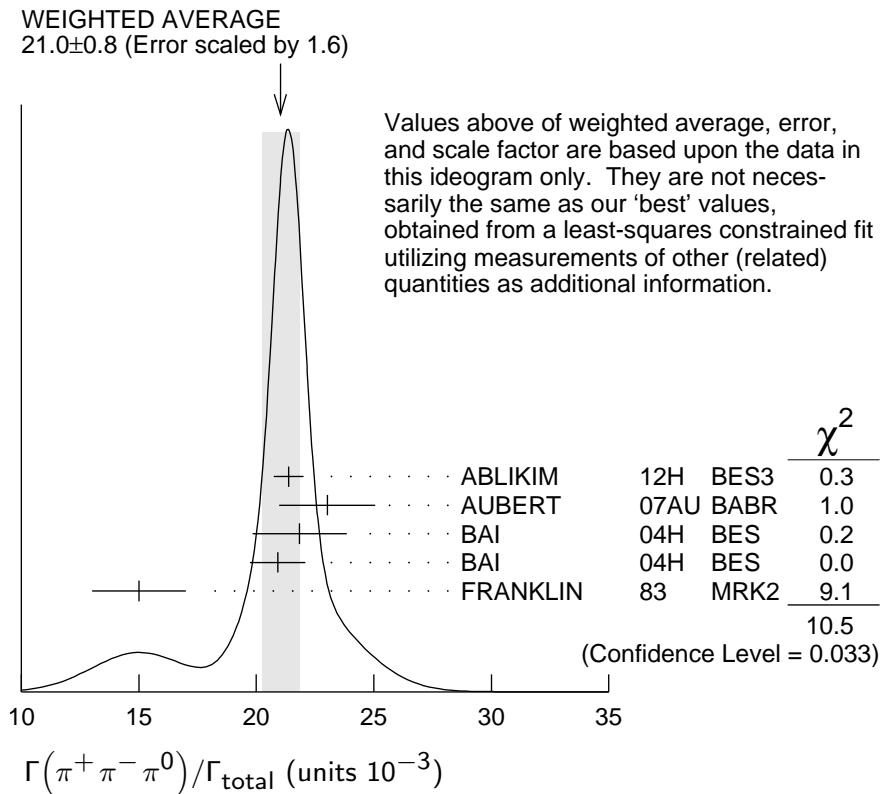

<sup>1</sup> From  $J/\psi \rightarrow \pi^+\pi^-\pi^0$  events directly.

<sup>2</sup> The quoted systematic error includes a contribution of 1.23% (added in quadrature) from the uncertainty on the number of  $J/\psi$  events.

<sup>3</sup> AUBERT 07AU reports  $[\Gamma(J/\psi(1S) \rightarrow \pi^+\pi^-\pi^0)/\Gamma_{\text{total}}] \times [\Gamma(\psi(2S) \rightarrow J/\psi(1S)\pi^+\pi^-) \times \Gamma(\psi(2S) \rightarrow e^+e^-)/\Gamma_{\text{total}}] = (18.6 \pm 1.2 \pm 1.1) \times 10^{-3}$  keV which we divide by our best value  $\Gamma(\psi(2S) \rightarrow J/\psi(1S)\pi^+\pi^-) \times \Gamma(\psi(2S) \rightarrow e^+e^-)/\Gamma_{\text{total}} = 0.808 \pm 0.013$  keV. Our first error is their experiment's error and our second error is the systematic error from using our best value.

<sup>4</sup> Mostly  $\rho\pi$ , see also  $\rho\pi$  subsection.

<sup>5</sup> Obtained comparing the rates for  $\pi^+\pi^-\pi^0$  and  $\mu^+\mu^-$ , using  $J/\psi$  events produced via  $\psi(2S) \rightarrow \pi^+\pi^-J/\psi$  and with  $B(J/\psi \rightarrow \mu^+\mu^-) = 5.88 \pm 0.10\%$ .

<b><math>2.77^{+0.34}_{-0.40}</math> OUR AVERAGE</b>				Error includes scale factor of 1.1.

$3.93 \pm 0.38^{+0.31}_{-0.84}$  <sup>1</sup> ABLIKIM 16J BES3  $J/\psi \rightarrow \gamma\pi^+\pi^-\eta'$

$2.87 \pm 0.09^{+0.49}_{-0.52}$  4265 <sup>2</sup> ABLIKIM 11C BES3  $J/\psi \rightarrow \gamma\pi^+\pi^-\eta'$

$2.2 \pm 0.4 \pm 0.4$  264 ABLIKIM 05R BES2  $J/\psi \rightarrow \gamma\pi^+\pi^-\eta'$

<sup>1</sup> From a fit of the measured  $\pi^+\pi^-\eta'$  lineshape that accounts for the abrupt distortion observed at the  $p\bar{p}$  threshold with a Flatte formula in addition to known backgrounds and contributors, as well as an *ad hoc* Breit-Wigner ( $M \approx 1919$  MeV;  $\Gamma \approx 51$  MeV) that is required for a good fit. Another explanation for the distortion provided by ABLIKIM 16J is that a second resonance near 1870 MeV interferes with the  $X(1835)$ ; fits to this possibility yield product branching fraction values compatible with that shown within the respective systematic uncertainties.

<sup>2</sup> From a fit of the  $\pi^+\pi^-\eta'$  mass distribution to a combination of  $\gamma f_1(1510)$ ,  $\gamma X(1835)$ , and two unconfirmed states  $\gamma X(2120)$ , and  $\gamma X(2370)$ , for  $M(p\bar{p}) < 2.8$  GeV, and accounting for backgrounds from non- $\eta'$  events and  $J/\psi \rightarrow \pi^0\pi^+\pi^-\eta'$ .
