

$\Sigma_c(2455)$ 

$I(J^P) = 1(\frac{1}{2}^+) \text{ Status: } ****$

The angular distribution of  $B^- \rightarrow \Sigma_c(2455)^0 \bar{p}$  favors  $J = 1/2$  (as the quark model predicts).  $J = 3/2$  is excluded by more than four standard deviations; see AUBERT 08BN.
