6960 ± 50 ± 30	<sup>3</sup> AAD	23BL ATLS	$pp \rightarrow J/\psi \psi(2S) X$
<sup>1</sup> In a model with two resonances, one describing the broad structure above threshold (mass $6650 \pm 20^{+30}_{-20}$ MeV, width $440 \pm 50^{+60}_{-50}$ MeV) interfering with single parton scattering, and a non-interfering $T_{cc\bar{c}\bar{c}}(6900)$ .			
<sup>2</sup> In a model where the broad structure above threshold interferes with non-resonant single parton scattering. Without interference the mass is $6905 \pm 11 \pm 7$ MeV.			
<sup>3</sup> Assuming a single resonance (could be another state). A $3\sigma$ signal is observed for an additional resonance with mass $7220 \pm 30^{+10}_{-40}$ MeV and width $90 \pm 60^{+60}_{-50}$ MeV.
