A_{FB}^{\ell h} \text{ in } \Lambda_b \rightarrow \Lambda\mu^+\mu^- &= 0.25 \pm 0.04
\end{aligned}$$

The branching fractions  $B(b\text{-baryon} \rightarrow \Lambda\ell^-\bar{\nu}_\ell \text{anything})$  and  $B(\Lambda_b^0 \rightarrow \Lambda_c^+ \ell^- \bar{\nu}_\ell \text{anything})$  are not pure measurements because the underlying measured products of these with  $B(b \rightarrow b\text{-baryon})$  were used to determine  $B(b \rightarrow b\text{-baryon})$ , as described in the note “Production and Decay of  $b$ -Flavored Hadrons.”

For inclusive branching fractions, e.g.,  $\Lambda_b \rightarrow \bar{\Lambda}_c$  anything, the values usually are multiplicities, not branching fractions. They can be greater than one.

 **$b$ -baryon ADMIXTURE ( $\Lambda_b, \Xi_b, \Omega_b$ )**

These branching fractions are actually an average over weakly decaying  $b$ -baryons weighted by their production rates at the LHC, LEP, and Tevatron, branching ratios, and detection efficiencies. They scale with the  $b$ -baryon production fraction  $B(b \rightarrow b\text{-baryon})$ .

The branching fractions  $B(b\text{-baryon} \rightarrow \Lambda \ell^- \bar{\nu}_\ell \text{anything})$  and  $B(\Lambda_b^0 \rightarrow \Lambda_c^+ \ell^- \bar{\nu}_\ell \text{anything})$  are not pure measurements because the underlying measured products of these with  $B(b \rightarrow b\text{-baryon})$  were used to determine  $B(b \rightarrow b\text{-baryon})$ , as described in the note “Production and Decay of  $b$ -Flavored Hadrons.”

For inclusive branching fractions, e.g.,  $B \rightarrow D^\pm \text{anything}$ , the values usually are multiplicities, not branching fractions. They can be greater than one.

***b*-baryon ADMIXTURE DECAY MODES** **$(\Lambda_b, \Xi_b, \Omega_b)$** 

	Fraction ( $\Gamma_i/\Gamma$ )	Scale factor $\langle p \rangle$ (MeV/c)
$p \mu^- \bar{\nu}$ anything	( 5.8 $^{+ 2.3}_{- 2.0}$ ) %	—
$p \ell^- \bar{\nu}_\ell$ anything	( 5.6 $\pm 1.2$ ) %	—
$p$ anything	( 70 $\pm 22$ ) %	—
$\Lambda \ell^- \bar{\nu}_\ell$ anything	( 3.8 $\pm 0.6$ ) %	—
$\Lambda \ell^+ \nu_\ell$ anything	( 3.2 $\pm 0.8$ ) %	—
$\Lambda$ anything	( 39 $\pm 7$ ) %	—
$\Xi^- \ell^- \bar{\nu}_\ell$ anything	( 4.6 $\pm 1.4$ ) $\times 10^{-3}$	1.2

## NOTES

[a]  $P_c^+$  is a pentaquark-charmonium state.

[b] Not a pure measurement. See note at head of  $\Lambda_b^0$  Decay Modes.

[c] Here  $h^-$  means  $\pi^-$  or  $K^-$ .
